

TABLE OF CONTENTS

TABLE OF CONTENTS	iii
PREFACE	viii
PREFACE TO FIRST EDITION	ix
1. INTRODUCTION	1
1.1 History of Biomechanics	1
1.2 Taxonomy of Biomechanics	2
1.3 Units of Measure and the System International	4
Rules for Reporting Units in the Metric System	5
1.4 Conversion of Units	7
1.5 Numerical Accuracy and Significant Digits	10
Problems	12
2. FUNDAMENTAL CONCEPTS OF BIOMECHANICS	14
2.1 Space, Mass and Time	14
Space	14
Mass	15
Time	15
2.2 Force	16
2.3 Frames of Reference, Planes and Axes	16
Cardinal, Relative or Anatomical Frame of Reference	17
Anatomical position	17
Centre of mass and centre of gravity	18
Newtonian or Absolute Frame of Reference	20
2.4 Scalars and Vectors	20
Scalars	20
Vectors	21
2.5 Parallelogram Law for the Addition of Vectors	21
2.6 Coordinate Systems	23
Polar to Rectangular Coordinates	23
Rectangular to Polar Coordinates	24
Position Vectors	25
Problems	26
3. STATICS	27
3.1 Universal Law of Gravitation	27
3.2 Resolution of Forces into Components	30
Rectangular Components and the Unit Vectors	31
Addition of Forces by Summing Components	32
Problems	33
3.3 Newton's First Law of Motion: Law of Inertia	34

Equilibrium of a Particle	34
First Law of Motion	35
Resultant Force	35
Forces on Rigid Bodies	36
Principle of Transmissibility of Forces	37
Moment of a Force	38
Problems	42
3.4 Levers of the Musculoskeletal System	44
Classes of Levers	46
First-class levers	47
Second-class levers	47
Third-class levers	47
Mechanical Advantage versus Speed Advantage	48
3.5 Laws of Statics	50
Moment of Force as a Vector Product	50
Laws of Statics	53
Free-body Diagram	53
Indeterminacy	54
Free-body diagrams: Rules	54
Steps for Solving Mechanics Problems	55
Problems	58
4. FRICTION	61
4.1 Laws of Dry Friction	62
4.2 Empirically Determining the Coefficients of Friction	67
Problems	71
5. KINEMATICS	74
5.1 Linear Kinematics	75
Displacement versus Distance	75
Displacement	75
Speed versus Velocity	76
Speed	76
Velocity	77
Acceleration	79
Constant Linear Velocity	82
Constant Linear Acceleration	83
Problems	87
5.2 Projectile Motion	89
Problems	94
5.3 Angular Kinematics	96
Angular Displacement	96
Radian measure	96
Angular Velocity and Acceleration	97
Constant Angular Acceleration	97
Problems	99
5.4 Relationship between Linear and Angular Measures	100
Angular and Linear Displacement	100

Angular and Linear Velocity	100
Transverse velocity	101
Angular and Linear Acceleration	102
Transverse acceleration	102
Radial acceleration	102
Total linear acceleration	102
Problems	104
References and Suggested Readings	106
6. KINETICS: FORCES AND MOMENTS OF FORCE	107
6.1 Newton's Second Law: Law of Acceleration	107
Problems	110
6.2 Moment of Force	111
Problems	115
6.3 Moment of Inertia	116
Problems	122
6.4 Newton's Third Law: Law of Reaction	123
Centripetal Forces	123
6.5 Pseudo-forces (Centrifugal, Coriolis and g -Forces)	127
Problems	129
7. KINETICS: IMPULSE AND MOMENTUM	131
7.1 Impulse-Momentum Theorem	131
Linear Impulse	133
Linear Momentum	135
Application of the Impulse-Momentum Theorem	136
Problems	140
7.2 Angular Impulse and Momentum Theorem	141
Angular Impulse	141
Angular Momentum	143
Problems	145
7.3 Conservation of Momentum	146
Conservation of Linear Momentum	146
Conservation of Angular Momentum	147
Problems	153
References and Suggested Readings	154
8. KINETICS: WORK, ENERGY AND POWER	155
8.1 Work-Energy Theorem	155
Work on a Particle	155
Work on a Rigid Body	157
Mechanical Energy	157
Mechanical work	159
Problems	162
8.2 Work of a Force or Moment of Force	163
Work of a Force	163
Work of a Moment of Force	166
Problems	168

8.3 Power	170
Average Power	170
Instantaneous Power	170
Power of a force	170
Power of a moment of force	171
Problems	173
8.4 Conservation of Mechanical Energy	174
Conservative Forces	174
Problems	178
8.5 Mechanical Efficiency	179
References and Suggested Readings	181
9. FLUID MECHANICS	182
9.1 Fluid Statics	183
Density	183
Relative density	183
Pressure	183
Pressure and depth	184
Pascal's Law	184
Archimedes' Principle	185
9.2 Fluid Dynamics	187
Drag Forces	187
Terminal velocity	188
Streamline Flow and the Bernoulli Principle	189
Bernoulli's principle	190
Lift Forces	191
Magnus Effect	192
References and Suggested Readings	193
10. APPLICATIONS	194
10.1 Gait Analysis	194
Temporal and Stride Analysis	194
Kinematic Analysis	196
Kinetic Analysis	197
Joint Power Analysis	201
References and Suggested Readings	204
10.2 Balance Control in Human Locomotion	205
Basic Principles and Theory	205
Comments about the Location and Size of the Base of Support	207
Walking and Running	208
Balance in the Elderly and in Neuromusculoskeletal Pathologies	210
References and Suggested Readings	210
APPENDIX A: TRIGONOMETRY	212
Basic Trigonometric Functions	212
Tangent function	212

Sine function	213
Cosine function	213
Pythagorean Theorem	213
Sine Laws	214
Cosine Laws	214
Inverse Trigonometric Functions	214
APPENDIX B: ALGEBRA	215
Order of Operators	215
Term	215
Factor	215
Roots of a Quadratic Equation	216
APPENDIX C: PLANE GEOMETRY	217
APPENDIX D: VECTOR ALGEBRA	220
Magnitude or Norm of a Vector	220
Negative of a Vector	220
Changing the Magnitude of a Vector	220
Addition of Vectors	221
Commutative Law for the addition of vectors	221
Associative Law for the addition of vectors	221
Distributive Law of scalar multiplication over addition	221
Multiplication of Vectors	221
By a scalar	221
Scalar, dot or inner product	221
Distributive property of scalar product over addition ..	222
Vector, cross or outer product	222
Distributive property of vector product over addition ..	222
APPENDIX E: CALCULUS	223
Differential Calculus	223
Integral Calculus	226
APPENDIX F: TABLES	229
GLOSSARY	233
BIBLIOGRAPHY	239
INDEX	241
EQUATIONS	253
